

Pilot Implementation of the FastTrack Program in the U.S. (2007-2008)

FastTrack is a program designed by ICELP for training management level personnel in business and industry settings. The goal is to improve their problem solving/decision making skills through 50 hours of training using selected pages for all three levels of the FIE Standard curriculum. SCEL has recently trained twenty management personnel from a local utility company using the FastTrack program. This pilot training was conducted by Dr. Martha Wood and Dr. Joyce Swofford over a five month period with two to three hour weekly sessions.
